The DNA and protein sequences of the invention are useful for producing transformed plants with composite disease resistance, especially resistant to diseases caused by pathogenic bacteria, such as: rice white leaf blight, brownstripe disease, glume blight, and seedling damping-off disease. As well as diseases caused by filamentous fungi, such as: rice blight, sheath blight disease, and leaf blight. The present DNA sequence encodes a Brassica defensin protein of the invention.

This cDNA represents the sequence of Rs-AFPI from Raphanus sativus. PCR primer AAQ38640 was used together with AAQ38641 to generate a probe for. screening a Raphanus sativus seed cDNA library. This primer corresponds to amino acids 2 to 7 of Rs-AFPI and has a sense orientation. The 144bp product was partially re-amplified using AAQ38642 and AAQ38641 to give a 123bp product, which was further reamplified with the same primers and digoxigenin-11-dUTP instead of dTTP to give a digoxigenin labeled PCR product. This was used to screen a lambda ZAPII cDNA library by in situ plaque hybridisation. Positive plaques were purified and subjected to two additional screening rounds with the same probe. Inserts were exclsed in vivo into the pBluescript phagemid form with the aid of helper phage
                                                                                  of plants - e.g. brassica or resistance to fungal and bacterial
                                                                                       Biocidal proteins isolated from seeds dahlia, useful for increasing plants'

R408.Inserts from 22 positive clones were excised by EcoRI digestion and their size compared by agarose gel electrophoresis. Four clones had insert sizes of approx. 400bp the others between 250-300bp. The inserts of the 4 largest clones were then sequenced and found to differ only in the length of their 5' and 3' UTR's. The longest sequence is given here. (Updated on 25-MAR-2003 to correct PN field.) 8888888888

WPI; 1994-249223/30. P-PSDB; AAR57325 Antimicrobial protein producing endo-symbiotic microorganisms - is produced by combining nucleic acids encoding the protein with an endophyte, useful for protecting plant hosts from esp. fungal disease.

Disclosure; Page 31; 39pp; English

plant-derived antimicrobial proteins are expressed in endosymbiotic Clavibacter xyli subsp. cynodontis (Cxc). Plants or seeds treated with recombinant Cxc are protected against fungal disease. A suitable antimicrobial protein is Rs-AFP1 from R. sativus. The full-length cDNA sequence of Rs-AFP1 is given in AAQ70128. (Updated on 25-MAR-2003 to

WPI; 1997-332786/30. P-PSDB: AAW19280 Antifungal peptide derived from radish antifungal protein 2 - and related DNA, useful for producing plants with increased fungal resistance and as therapeutic or preservative agent.

```
This cDNA sequence encodes an Rhapanus sativus (radish) antifungal protein (Re-AFPI). Analogues of the homologous protein. Rs-AFPI) AAM19281, have also been produced (see AAM1928-92, AAM19294-98, AAM19301-04, AAM19330-34 and AAM31765-934). Plants containing DNA sequences encoding these proteins have improved resistance to fungi. Compositions containing the peptides can be used to control fungi or bacteria in pharmaceutical (e.g. treatment of Candida infections) or preservative purposes (as food additives). In agriculture, the peptide may be used to improve disease resistance or disease tolarance of crops, either pre or post harvest. When applied to plants they may also have curative as well as protective actions. The peptides may also be used to protect plants by introducing them, or a microorganism capable of expressing the peptide into the soil. (Updated on 25-MAR-2003 to correct plied).

                                                                                                                                                                                                                                               This cDNA clone codes for the preprotein for radish antifungal protein 1 (Rs-AFP1) (AAW19617). Novel antifungal proteins are based on Rs-AFP1, Rs-AFP2 (see AAW19616), Rs-AFP3 and Rs-AFP4, especially those in which Gly9 is repaced by Arg, Val39 by Arg, Gly9 by Arg, Glus by Met and/or Gly16 by Met. Mutants (see AAW186371-901) of Rs-AFP2 are specifically claimed. The mutants show improved salt tolerant antifungal activity, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               106 AAGTIGIGGGAAAGGCCAAGIGGGACAIGGICAGGAGICIGIGGAAACAATAACGCAIGC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       21 LysAsnGlnCysIleArgLeuGluGlyAlaGlnHisGlySerCysAsnTyrValPhePro

Patent No. 6653280

GENERAL INFORMATION:
APPLICANT: Shah, Dilip M.
APPLICANT: Rescherger, Cindy A.
APPLICANT: Rescherger, Cindy A.
TITLE OF INVENTION: Antifungal Polypeptide ALYAFP from Alyssum and Methods for Control TITLE OF INVENTION: Plant Pathogenic Fungi
TITLE OF INVENTION: Plant Pathogenic Fungi
TITLE OF INVENTION: Plant Pathogenic Fungi
TITLE OF INVENTION: 18-201-04-09
CURRENT APPLICATION NUMBER: 09/103,489
PRIOR FILING DATE: 1998-06-24

                                                                       This sequence is antifungal protein Rs-AFP1 from Raphanus sativus. The exact source and isolation of the encoding DNA sequence is unclear from the specification. The protein is useful for combating fungi or bacteria eg gram positive bacteria and plant pathogenic fungii. It has moderate sensitivity to ions and an apparent low toxicity for cultured human cells. Plants transformed with the encoding DNA show increased disease resistance. (Updated on 25-MAR-2003 to correct PN field.)

                                                                          plant-derived antimicrobial proteins are expressed in endosymbiotic clavibacter xyli subsp. cynodontis (Cxc). Plants or seeds treated with recombinant Cxc are protected against fungal disease. A suitable antimicrobial protein is Rs-AFPI from R. sativus. The full-length cDNA sequence of Rs-AFPI is given in AAQ70128, and the amino acid sequence predicted from this sequence in AAR57325. (Updated on 25-MAR-2003 to

Antifungal peptide derived from radish antifungal protein 2 - and related DNA, useful for producing plants with increased fungal resistance and as therapeutic or preservative agent.
                                                                                                                                                                                                                                                    This protein sequence is a Raphanus sativus (radish) antifungal protein also been produced (see AAW19282-92, AAW1924-98, AAW19201-04, AAW19330-34 and AAW3765-83). Plants containing DMs sequences encoding these proteins have improved resistence to fungi. Compositions containing the peptides can be used to control fungi or bacteria in pharmaceutical (e.g. treatment of Candia infections) or preservative purposes (as food additives). In agriculture, the peptide may be used to improve disease resistance or disease tolerance of crops, either pre or post harvest. Fesitance or disease tolerance of crops, either pre or post harvest. When applied to plants they may also have curative as well as protective actions. The peptides may also be used to protect plants by introducing them, or a microorganism capable of expressing the peptide into the soil. (Updated on 25-MAR-2003 to correct Pl Field.)

This polypeptide comrpsies the preprotein for radish antifungal protein I (RS-AFP1). Novel antifungal proteins are based on Rs-AFP1, Rs-AFP2 (see AAW1916). NS-AFP3 and Rs-AFP4, especially those in which Gly9 is repaced by Arg, Val39 by Arg, Gly9 by Arg, Glu5 by Met and/or Gly16 by Met. Mutants (see AAW26371-90) of Rs- AFP2 are specifically claimed. The mutants show improved salt tolerant antifungal activity, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     135

Antimicrobial, Rs-AFP2; symbiosis; disease-resistance; fungus-resistance; Clavibacter xyli subsp. cynodontis; Cxc; crop improvement; endophyte; PCR; polymerase chain reaction; mutagenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Plant-derived antimicrobial proteins are expressed in endosymbiotic clavibacter xyli subsp. cynodomis (Cxc). Plants or seeds treated with recombinant Cxc are protected against fungal disease. A suitable antimicrobial protein is Rs-AFP1 from R. sativus. The full-length cDNA sequence of PCM assisted atte-directed mutagenesis of Rs-AFP2 is given in AAAC70130 and the deduced amino acid sequence in AAR57127. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        produced by combining nucleic acids encoding the protein with an endophyte, useful for protecting plant hosts from esp. fungal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antimicrobial protein producing endo-symbiotic microorganisms - is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             41 SerGlyValCysGlyAsnAsnAsnAlaCysLysAsnGlnCysIleArgLeuGluLysAla 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Biocidal proteins isolated from seeds of plants - e.g. brassica or dahlia, useful for increasing plants' resistance to fungal and bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence is part of antifungal protein Rs-AFP2, decoded from a mutaganised RsAFP1 clone derived from Raphanus sativus. The protein is useful for combating fungi or bacteria eg gram positive bacteria and plant pathogenic fungii. It has moderate sensitivity to ions and an apparent low toxicity for cultured human cells. Plants transformed with the encoding DNA show increased disease resistance. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MetAlaLysPheAlaSerIleIleAlaLeuLeuPheAlaAlaLeuValLeuPheAlaAla

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention comprises the amino acid and coding sequences of antimicrobial (defensin) proteins from Brassica. The DNA and protein sequences of the invention are useful for producing transformed plants with composite disease resistance, especially resistant to diseases caused by pathogenic bacteria, such as: rice white leaf blight, brownstripe disease, glume blight, and seedling damping-off disease. As well as diseases caused by filamentous fungi, such as: rice blight, sheath blight disease, and leaf blight. The present amino acid sequence represents a Brassica defensin protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                75

Novel protein from Brassica campestris, useful as antimicrobial against plant pathogenic filamentous fungi or pathogenic bacteria, especially for treating e.g. rice white leaf blight and sheath blight disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises the amino acid and coding sequences of antimicrobial (defensin) proteins from Brassica. The DNA and protein sequences of the invention are useful for producing transformed plants with composite disease resistance, especially resistant to diseases stripe disease, backen bight, and seedling damping-off disease. As well as diseases caused by filamentous fungi, such as: rice blight, sheath blight disease, and leaf blight. The present amino acid sequence represents a Brassica defensin protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               76 TTCGAAGCACCAACAATGGTGGAAGCACAGAAGTTGTGCGAAAAGGCCAAGTGGGACATGG

A phage or plasmid comprising radishin can be used for increasing resistance of paddy and rice blast disease against pathogenic microbes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          16 AIGGCIAAGITIGCGICCAICAICGCACTICITITIGCIGCICTIGITCITITIGCIGCT

The present sequence represents a protein of the invention, comprising the mature proteins of the plant defensins, the Dahlia antimicrobial protein (AMP) 1 and the antifungal protein 2 (RsAPP2), linked by a linker propeptide of the invention. The specification describes methods for improving expression levels of one or more proteins in a transgenic plant. The method comprises inserting a DNA sequence having a promoter region operably linked to two or more protein encoding regions separated by a DNA sequence coding for a linker propeptide and a terminator region. The method is used to produce proteins in plants. The linker propeptide comprising a cleavage site, whereby the expressed polyprotein is posttranslationally processed into the component protein molecules. The propeptide sequence is rich in amino acids A, v. S and T and contains dipeptidic sequences consisting of either two acidic, two basic or one acidic and one basic residue as a cleavable linker sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          76 ITCGAAGCACCAACAATGGTGGAAGCACAQAAGTTGTGCGAAAGGCCAAGTGGGAACATGG 135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          108 MetalalysPheAlaSerIleIleAlaLeuLeuPheAlaAlaLeuValLeuPheAlaAla 127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Improving expression of polyproteins in plants involves coexpression of two or more proteins in plants within a single transcription unit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           16 AIGGCIAAGTIIGCGICCAICCAICGCACIICIIIIIIGCIGCICIIGIICIIIIIIGCIGCI

The invention relates to sunflower anti-pathogenic proteins such as pathogenesis-related protein-5 (PR5), defensin and berberine bridge enzyme (BBE). DNA constructs containing nucleotide sequences encoding the anti-pathogenic proteins are useful for increasing resistance against pathogens e.g. fungal pathogen in moncoco or dicot plants. The purified sunflower proteins (PR5, defensin or BBE) and compositions containing the proteins are useful for controlling plant pathogen by using procedures of spraying, dusting, scattering or seed coating, to the plants or the proteins are useful as genetic markers in disease resistance breeding programs. Promoters of environment of the pathogen. The anti-pathogenic genes are useful as genetic markers in disease resistance breeding programs. Promoters capable of driving expression of the proteins are useful to express proteins can also be used in agricultural and pharmaceutical compositions as antifungal and antimicrobial agents. The nucleotide sequences encoding and for enhancing plant defense mechanism. The present sequence

represents a radish antifungal defension (Swiss-Prot Accn No. P30230),

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents an Arabidopsis PDF1.2 gene which is used in a novel method for the protection of plants against pathogens which involves inducing expression of a plant defensin gene by stimulating the jasmonate and/or ethylene pathways. The method is used to induce protection against necrotrophic pathogens, specifically fungi and does not require cytotoxic or potentially harmful chemicals

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a disease-resistant plant in which a wasabi gamma-thionin gene is introduced. Also described is a method for the creation of the above disease-resistant plant by introducing a wasabi gamma-thionin gene to a plant. The present sequence represents a Butrema wasabi (Wasabia japonica) gamma-thionin protein from the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the Arabidopsis PDF1.2 protein which is used in a novel method for the protection of plants against pathogens which involves inducing expression of a plant defensin gene by stimulating the jasmonate and/or ethylene pathways. The method is used to induce protection against necrotrophic pathogens, specifically fungi and does not require cytotoxic or potentially harmful chemicals

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 20, Sequence 59, Requence 21, Sequence 21, Sequence 21, Sequence 15, Sequence 15, Requence 15, Reque

Sequence 20, Application US/09103489

Patent No. 6215648

GENERAL INFORMATION:

APPLICANT: Liang, Jihong

APPLICANT: Shah, Dilip M.

APPLICANT: Shah, Yonnie S.

APPLICANT: Rosenberger. Cindy A.

TITLE OF INVENTION: Antifungal Polypeptide and Methods for TITLE OF INVENTION: Controlling Plant Pathogenic Fungi

NUMBER OF SEQUENCES: 20

CORRESPONDENCE ADDRESS:

ADDRESSES: Charles E. Cohen, Monsanto Company, BB4F

STREET: St. Louis

STATES Missouri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SOFTWARE: Petentin Release #1.0, Version #1.30 CURRENT APPLICATION DATA: P. 10, Version #1.30 APPLICATION NUMBER: US/09/103,489 FILING DATE: 24-UN-1998 CLASSIFICATION: 800 ATTORNEY/AGENT INFORMATION: NAME: Cohen, Charles E. Sequence 15, Application US/09629381D

Patent No. 6653280

GENERAL INFORMATION

APPLICANT: Shah, Dilip M.

APPLICANT: Wu, Yonnie S.

TITLE OF INVENTION: Antifungal Polypeptide ALYAFP from Alyssum and Methods for Control TITLE OF INVENTION: Plant Pathogenic Fungi

TITLE OF INVENTION: Plant Pathogenic Fungi

TITLE OF INVENTION: Plant Pathogenic Fungi

CURRENT FILING DATE: 2001-04-09

PRIOR PAPLICATION NUMBER: US/09/829,381D

PRIOR PAPLICATION NUMBER: 09/103,489

PRIOR FILING DATE: 1998-06-24

NUMBER OF SEQ ID NOS: 20

SOCTWARE: Patentin version 3.1

LENGTH: 79
